Sewer Smoking Project

Conover Fire Department spent the morning of June 4, 2009 following the trail of smoke through Conover. Conover Public Works was “smoking the sewer” as part of a project that will begin a major sewer line repair and replacement project in the Northeast area of the City. Or the past several days, the sewer smoke created quite a stir around town. So, on Thursday morning June 4th, when we were told that the project was going into the Downtown area, we decided to ride along just to help ease folk’s minds when they saw the smoke. Even before we could get downtown, we had a report of smoke coming up through the roadway, possible “sewer fire”. We had numerous questions throughout the morning and even some pretty scared folks when some of the smoke made its way into homes and businesses in the area. They were very glad that we where there to answer their questions and ease their minds. Areas that were affected included just about the whole Northeast side of town.
